Subject replacement figures for EIB Workplan

Good afternoon – During discussion of the revised EIB Workplan, Henning noted that the concentrations of vinyl chloride on some figures did not match the tabulated results in Table A-1. I reviewed the figures and found that indeed we had a formatting/scaling error that transposed the data as follows:

Figure 1-3: Original figure overstated the concentration of vinyl chloride in WS-19-71.

Figure 1-4: Original figure overstated the concentration of ethene in WS-19-101.

Figure 1-5, 1-6: Original figures overstated the concentration of vinyl chloride in WS-18-71.

No revision to the interpretation of the monitoring data or remediation approach is required. The corrected figures are attached; I apologize for any confusion this may have caused. Hard copies of these figures will be distributed tomorrow.
